Inexact ADMM, equality-constrained QP: work and time over the s sweep at $\sigma = 0.1$
measured (median; whiskers 10–90%)
Theorem 4.3 bound with the observed K_δ (median)
exact ADMM (Cholesky)
near-exact ADMM (inner tol 10^{-12})
recommended $s^\star$ (Lemma 4.2)
unrelaxed $s^\star_{\mathrm{ex}}$ (Remark 4.4)
