Inexact PPM, Huber-loss fitting: work and time over the σ sweep at s = 1
measured (median; whiskers 10–90%)
Theorem 4.3 bound with the observed K_δ (median)
gradient descent, step 1/L (no outer iterations)
near-exact PPM (inner tol 10^{-12})
recommended $\sigma^\star$ (Prop. 5.1)
Outer iterations
Accepted updates K_δ
