
Rotation operator ($\gamma = 2$): σ sweep at $s = 1$, $\delta = 10^{-9}$
$\sigma = 0.01$ ($K_\delta = 26$, 1283 Richardson steps)
$\sigma = 0.05$ ($K_\delta = 23$, 803 Richardson steps)
$\sigma = 0.2$ ($K_\delta = 23$, 553 Richardson steps)
$\sigma = 0.5$ ($K_\delta = 62$, 1002 Richardson steps)
$\sigma = 0.9$ ($K_\delta = 48$, 484 Richardson steps)
$\sigma = 1$ ($K_\delta = 235$, 1885 Richardson steps)
near-exact PPM, inner tol 10^{-12} ($K_\delta = 26$, 4654 Richardson steps)
$\sigma^\star = 0.133$, from (α, C_0) of Richardson iteration ($K_\delta = 27$, 632 Richardson steps)
Against outer iterations
