Rotation operator ($\gamma = 2$): one-step decrease against its guarantee
observed over the accepted updates (median; whiskers 10–90%)
the same at the recommended $\sigma^\star$
guaranteed by Lemma 3.2: $(1-\sigma)/(1+\sigma)$
guaranteed for exact steps: 1
near-exact run (median)
exact steps
near-exact
$\sigma^\star$
10^0
10^{-1}
10^{-2}
10^{-1}
10^0
Decrease of $\|w_k - x^\star\|^2$ per $\|yz_k\|^2$
Inexactness σ
